

Radiation Safety – Health Physics

Neutron Spectroscopy Summer School

Training Outline

- **Radiation, Ionization, & Radioactivity**
- **Radiation Protection & Safety**
- **Radiation Dose**
- **Questions ??**

Electromagnetic Radiation

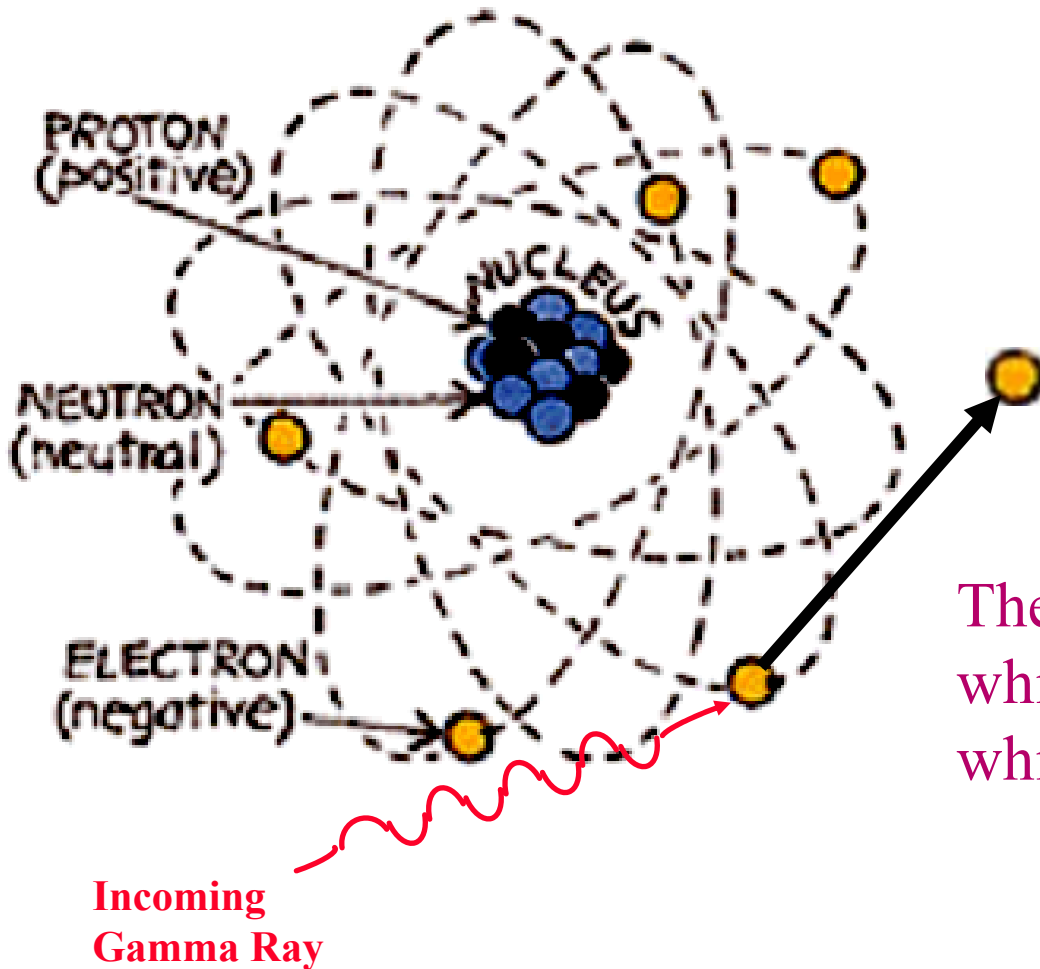

THE ELECTROMAGNETIC SPECTRUM

Definitions

- ▼ **Radiation:** Energy (electromagnetic waves or particulates)
- ▼ **Ionization:** The removal of electrons from an atom
- ▼ **Ionizing Radiation:** Particles or rays with sufficient energy to remove electrons from atoms

Ionization

The ionized atom causes changes which **MAY** damage cells, which **MAY** cause health effects

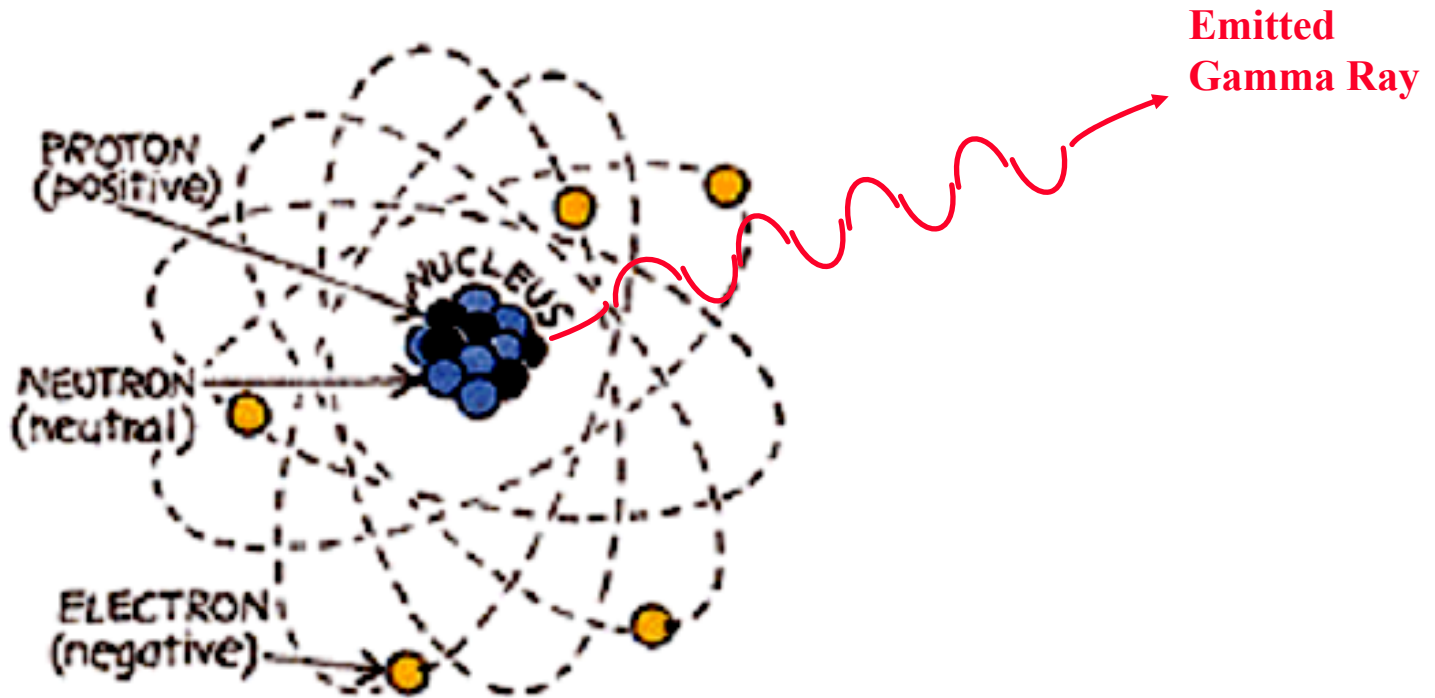

Ionizing Radiation

Atoms & Radioactivity

Most atoms are stable, but some may emit excess energy (radiation) and are called radioactive.

Radiation Sources

Confinement

Guide Hall

Radiation Exposure

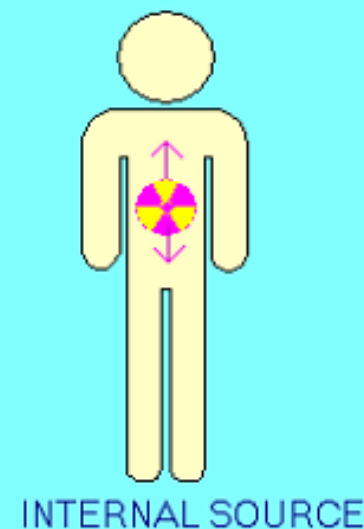

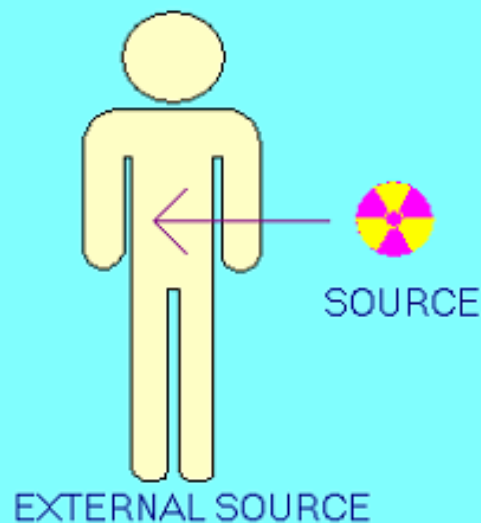

SOURCE GEOMETRY

There are **two ways** that you can be exposed to a radiation source:

1. If the source is outside the body, you will receive an **external** exposure.
2. If the source gets into the body, you will receive an internal exposure.

Both kinds of exposure are of **equal concern**, despite **subjective feelings** to the contrary by many workers.

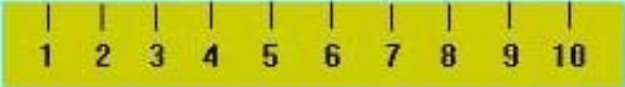

Reducing External Exposure

PROTECTION METHODS

EXTERNAL EXPOSURE

 **TIME**

 **DISTANCE**

 **SHIELDING**

The diagram illustrates three methods for reducing external exposure: Time, Distance, and Shielding. Each method is represented by an icon and a corresponding label. The 'TIME' method is shown with a clock icon, 'DISTANCE' with a ruler icon, and 'SHIELDING' with a shield icon. The shield icon is a rectangular block with a grid pattern. The entire diagram is set against a light blue background with a white border.

Time

PROTECTION METHODS

TIME

Always remember that the longer the exposure, the greater the dose, which leads to a greater amount of damage. Thus, your **first protective measure** should be to **minimize the time** of exposure.

Distance

PROTECTION METHODS

DISTANCE

The closer you are to a source, the greater your exposure will be.

By decreasing distance by 1/2, exposure increases by 4 times.

Distance – Inverse Square Law

$$\text{RADIATION INTENSITY} \propto \frac{1}{(\text{distance})^2}$$

Shielding

PROTECTION METHODS

SHIELDING

Shielding can be used to reduce your exposure to sources of radiation.

Small block of placeholder text representing a radiation source.

mrem/h

300

Small block of placeholder text representing a radiation source.

100

Increasing the amount of shielding will decrease your amount of exposure.

Internal Exposure

INTERNAL EXPOSURE

Sources can enter the body in four ways:

A. INGESTION

(EATING OR DRINKING)

B. INHALATION

(BREATHING)

C. ABSORPTION

(THROUGH THE SKIN)

D. INJECTION

Once in the body, it is very **difficult to remove** a source of exposure.

Campfire Analogy

Radiation Dose Units

Dose Units are known as the **rad** and **rem**

rad = the amount of energy absorbed in tissue

rem = relates the amount of ionization in air (R) or the amount of absorbed energy (rad) to the degree of biological damage

Radiation Type	Quality Factor (QF)
X-ray	1
Gamma rays	1
Beta particles	1
Neutrons	3-10
Alpha particles	20

Average Background Dose

US Average ~ 360 mrem/yr
Denver, CO ~ 700 mrem/yr
Brazil (beaches) ~ 5,000 mrem/yr

Health Physics Labels/Signs

>5 mrem/hr
(whole body dose)

>100 mrem/hr
(whole body dose)

~100,000 mrem/hr
(localized dose)

Radiation Dosimetry

Pocket Dosimeter

**General Public Dose
Limit = 100 mrem/yr**

**Occupational Dose
Limit = 5,000 mrem/yr**

Real-Time Dose Readout

Radiation Dose and Risk

Radiation Risk Comparisons

Activity*

Smoking 1 cigarette

Travel 50 miles by car

Drinking 30 cans of diet soda

Eating 100 grilled steaks

Chest X-ray (10 mrem)

Cause of Death

Cancer, Heart Disease

Fatal Accident

Cancer (saccharin)

Cancer (benzopyrene)

Cancer

***Performing this activity increases your chance of dying by one in a million (1×10^{-6})**

Loss of Life Expectancy

Cause	Life Lost (time)
Smoking 20 cigarettes a day	6 years
Overweight (by 15%)	2 years
Alcohol consumption (U.S. average)	1 year
Agricultural accidents	320 days
Construction accidents	227 days
Auto accidents	207 days
Home accidents	74 days
Occupational radiation dose (1 rem/y)	51 days

Ionizing Radiation - Overview

Can not see it, feel it, or smell it

- we must rely on training and equipment to protect ourselves

Relatively simple to detect and measure

- unlike chemical and biological hazards
- we can quickly assess and take action

*Biological effects have been intensely studied
for 50 years*
